

Fast-Moving Consumer Goods

27% increase in average ticket revenue, driven by deeper consumer insights

CLIENT PROFILE

Multinational food and beverage company driving data-led B2B sales growth

The client is a multinational food and beverage services company operating across LATAM with B2B sales as a core line of business. The company sought to increase sales revenue while improving churn prediction accuracy and gaining a clearer understanding of customer preferences to support more effective sales and retention strategies.

BUSINESS CHALLENGES

Turning sales growth and retention into a predictable outcome

To strengthen B2B performance, the client needed to improve revenue generation while addressing churn risk and limited visibility into customer behavior.

Revenue growth pressure

Increase total B2B sales and ticket volume

Churn predictability

Improve the accuracy of churn rate predictions to support proactive retention

Customer insight gaps

Better understand customer preferences and buying behavior to inform sales actions

SOLUTIONS IMPLEMENTED

Smarter B2B sales through predictive insights

TP supported the client in shifting from a traditional, in-person sales approach to a smarter, insight-led omnichannel model. Using TP.ai Growth integrated tools and accelerators, predictive and interaction analytics were applied to guide segmentation, improve decision-making, and strengthen sales and retention strategies.

REAL RESULTS

Predictable gains across sales and retention

By applying predictive intelligence and interaction analytics across the sales journey, TP helped the client improve revenue performance, strengthen retention decision-making, and deliver more consistent customer outcomes.

Intelligent insights

Guided sales and retention strategy through interaction analytics and data-driven analysis, capturing and analyzing customer interactions to identify trends, pain points, and buying behaviors, and surface growth opportunities and next-best actions

Predictive intelligence

Strengthened performance predictability through data-driven forecasting, using predictive modeling to maximize contact rates and assess churn probability with accuracy

Insight-led segmentation

Improved book-of-business quality by prioritizing and grouping customers based on buying patterns, including drop size and purchase frequency, enabling more focused and effective recurring sales actions
